# _WindIndicator

The class shows the wind direction. For this an arrow is drawn in a screen object.
This class is used in the AddOn "Weather Forecast"

## Interfaces

### Servers

| | |
|---|---|
| **Server0** | Is set to the current wind direction minus 90 degrees for drawing the arrow. |
| Refresh | Writing access to this server updates the output area |

### Clients

| | |
|---|---|
| **Lse** | object channel to the LSE object |
| **WindDirection** | Connection to transfer the current wind direction |

## Global Methods

| | |
|---|---|
| **Draw** | serves for drawing the content |
| **IF_Run** | is automatically called, when the object is opened in the visualization |
